Digest

Five inboxes in, one page out.

It reads

Gmail, Outlook, Slack, WhatsApp Business — or Discord and your group chats

It ranks

By who is blocked and what has a deadline, using rules you set

It writes

A short brief twice a day, in prose, with every claim traceable

Read-only access, revocable per source from your account at any time. Nothing is ever sent on your behalf.

Know what happened, in one page a day.

Create the account first. Platforms get connected on the next screen, one at a time, read-only.

Two accounts in one: a work brief and a personal, catch-up live under this login, each with their own sources, ranking and schedule — and they are never summarized together.

The login/signup page.

New User (Signup):

The wireframe shows a web browser window with the address bar displaying 'app://setup/world' and a 'Setup - 1 of 4' indicator. The main content area is titled 'Which inbox life should I keep on top of?' with a subtitle explaining that two different summaries will be created based on selected sources and ranking. The setup is divided into two main sections: 'Work' and 'Personal'. The 'Work' section is currently selected and highlighted with a blue border. It includes a 'selected' button, a row of four source selection buttons (G, O, S, W), a list of sources (Gmail, Outlook, Slack, WhatsApp, Business, Teams), and a ranking rule: 'Ranked by who is blocked and what has a deadline.' The 'Personal' section includes an 'Add too' button, a row of three source selection buttons (D, W, T), a list of sources (Discord, WhatsApp, Telegram, group DMs), and a ranking rule: 'Ranked by mentions and by plans that changed.' A dashed box below these sections contains the text: 'You can run both and switch between them later — same account, two front pages, one sidebar that changes with the world you're in.' On the left side, there is a 'Setting up' sidebar with four steps: 1. Your world, 2. Sources, 3. What's read, and 4. What matters. Below these steps is a 'First brief' section and a note about read-only access. At the bottom right, there is a 'Continue → connect sources' button. A footer note states 'Takes about 2 minutes'.

app://setup/world Setup - 1 of 4

Setting up
Four pages, once. Each one feeds the next.

1 · Your world
Work, personal or both — decides sources and ranking

2 · Sources
The accounts to read. Nothing to summarize without them.

3 · What's read
Channels and labels — scoping the input keeps the output short

4 · What matters
The ranking rule, who and what is always urgent for you

Then

First brief
Build once, then ready before you open the tab

Read-only access. Replies are only ever sent by you, from the original platform.

Which inbox life should I keep on top of?
The two never get mixed into one summary — different sources, different ranking, different tone.

Work
selected
G O S W
Gmail, Outlook, Slack, WhatsApp, Business, Teams
Ranked by who is blocked and what has a deadline.

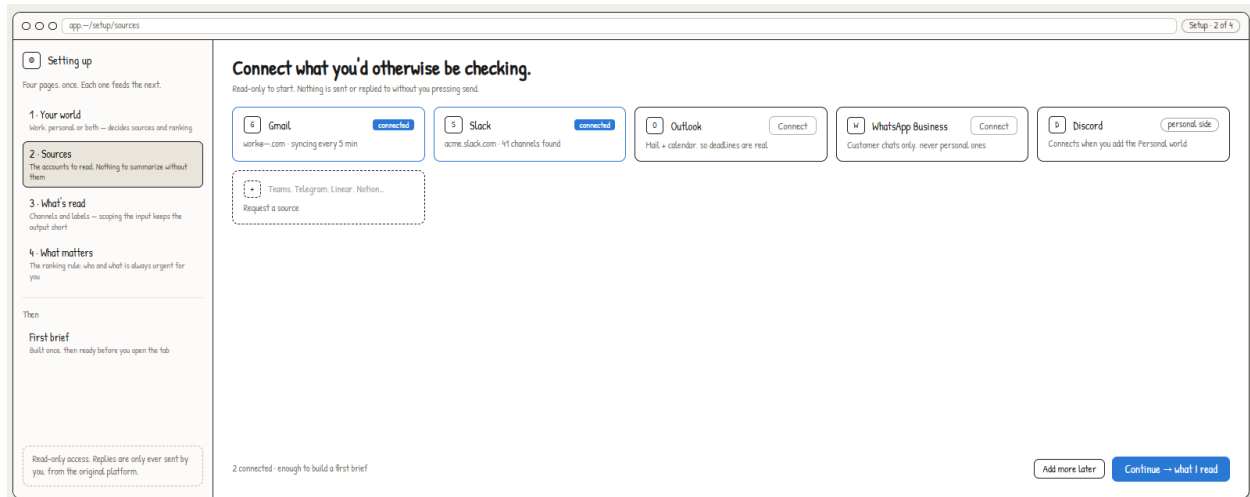

Personal
Add too
D W T
Discord, WhatsApp, Telegram, group DMs
Ranked by mentions and by plans that changed.

You can run both and switch between them later — same account, two front pages, one sidebar that changes with the world you're in.

Takes about 2 minutes

Continue → connect sources

This is the entry point for a new user after logging in and splitting the product into 2. For a user that needs it for both work and personal use, both options can be selected (which is shown here in the wireframe) but their summaries won't be merged.

User links different accounts from a list of available options. The access is read-only and nothing is ever sent on their behalf.

app://setup/scope

Setup - 3 of 4

Setting up

Four pages, once. Each one feeds the next.

1 · Your world

Work, personal or both — decides sources and ranking

2 · Sources

The accounts to read. Nothing to summarize without them

3 · What's read

Channels and labels — scoping the input keeps the output short

4 · What matters

The ranking rule, who and what is always urgent for you

Then

First brief

Built once, then ready before you open the tab

Read-only access. Replies are only ever sent by you, from the original platform.

Now the part that keeps summaries short.

Everything you exclude here is something you'll never have to skim later.

Estimated reading load: ~210 messages a day → one page

adjust anytime from the sidebar

Step 3 of 4

Continue → what matters to me

This page looks at the input, eg. Slack over here, and creates and estimate of the reading load.

app - /setup/tuning

Setup - 4 of 4

Setting up

Four pages, once. Each one feeds the next.

1 - Your world

Work, personal or both -- decides sources and ranking

2 - Sources

The accounts to read. Nothing to summarize without them

3 - What's read

Channels and labels -- scoping the input keeps the output short

4 - What matters

The ranking rule, who and what is always urgent for you

Then

First brief

Built once, then ready before you open the tab

Read-only access. Replies are only ever sent by you, from the original platform.

What does "needs you" mean for you?

This is the ranking rule. Without it everything comes back equally important -- the thing you don't want.

Build my first brief

The priority is set by the user on the different channels/aspects they want to focus on.

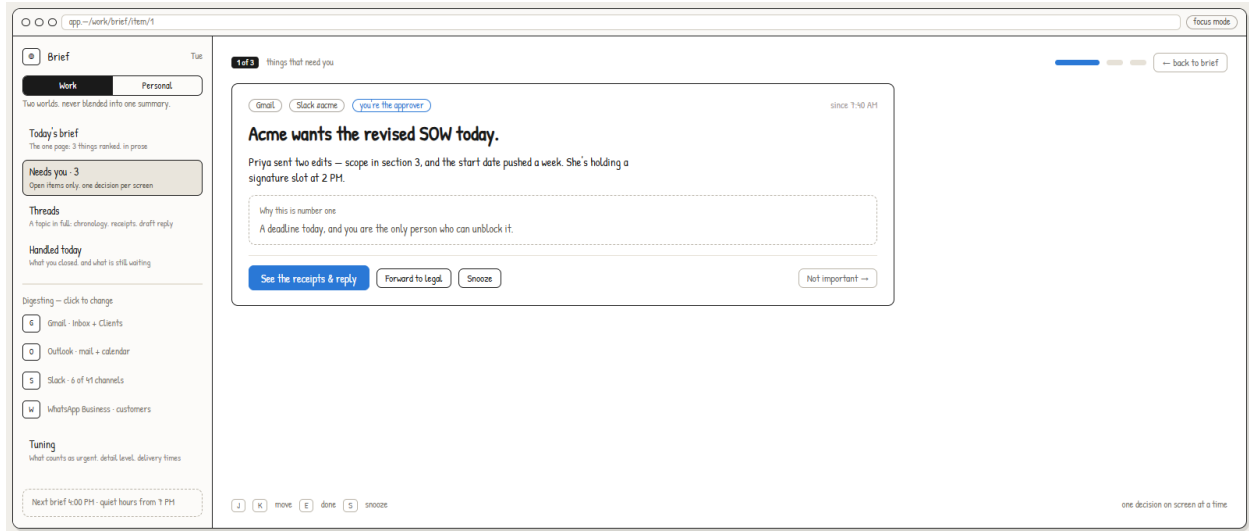

Returning User (Direct login):

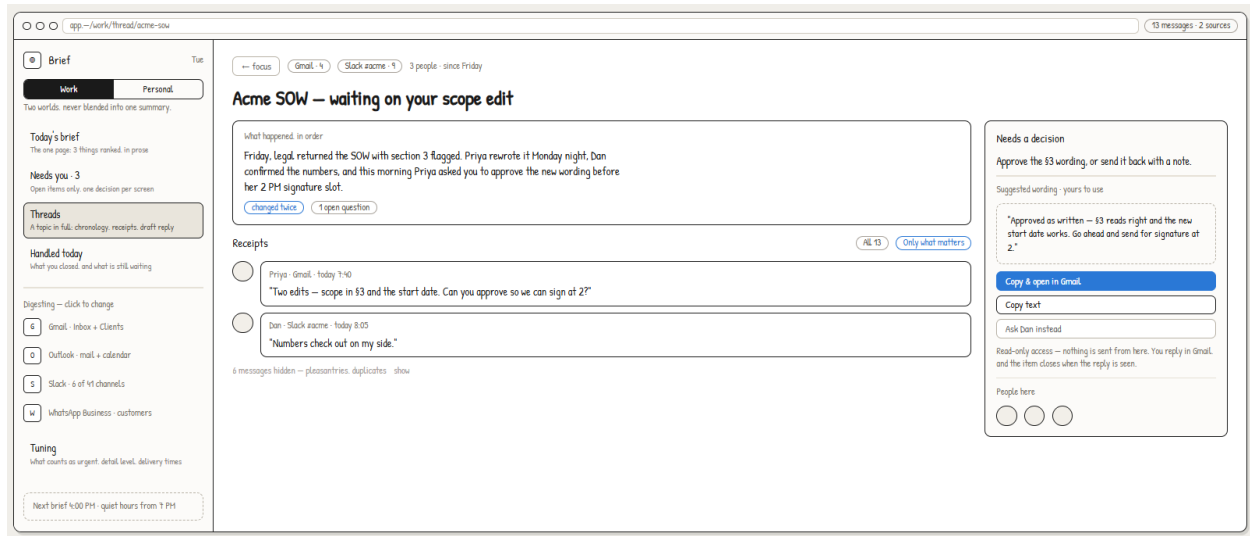

The first screen after logging in. Gives a brief overview of what to expect when opening up.

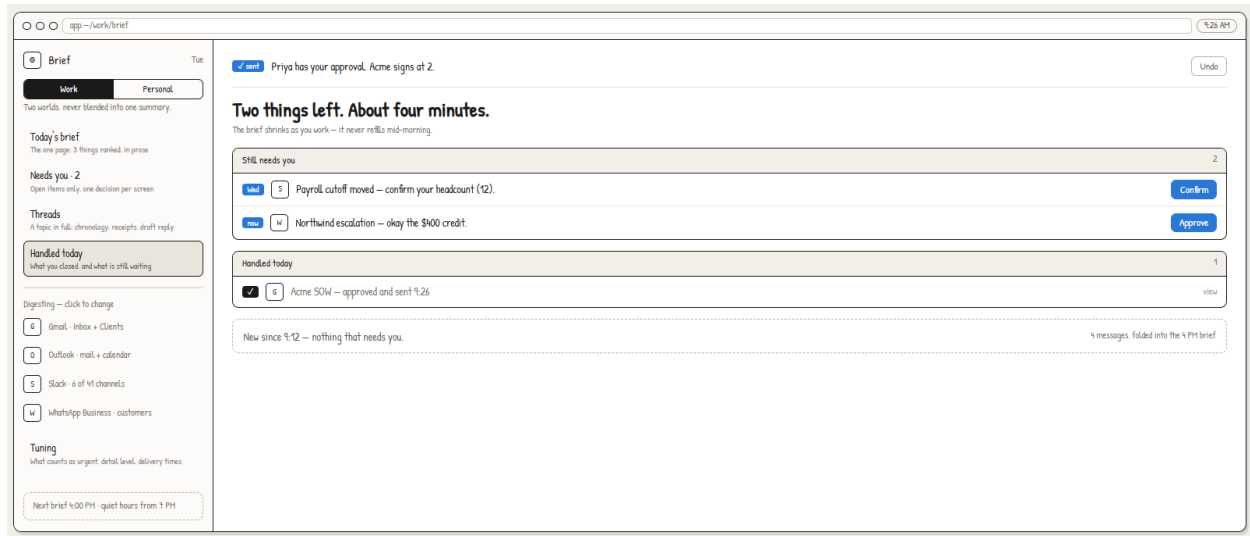

The home page and essentially the whole product.

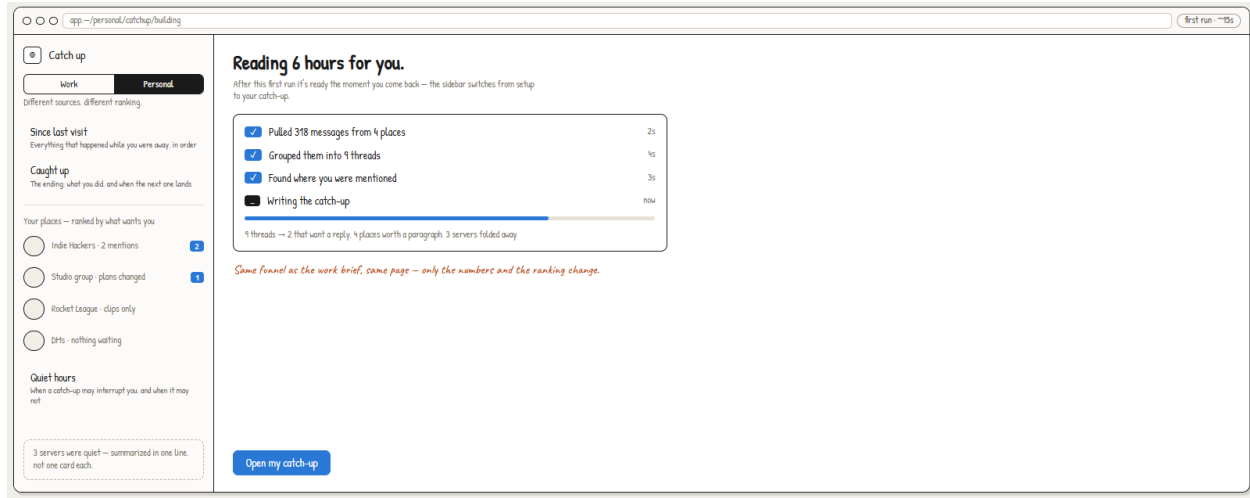

Selecting an item opens a focus view for more detailed information on the task.

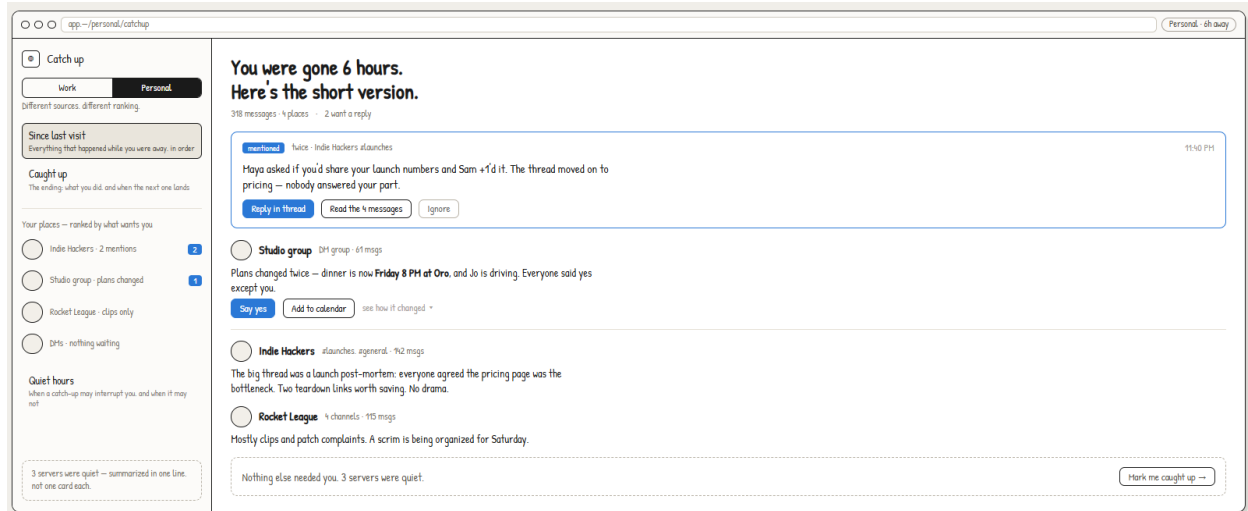

Quotes the context needed to give a proper reply for instance here and send a copy of the response to Gmail. Does not have permission to send mails directly.

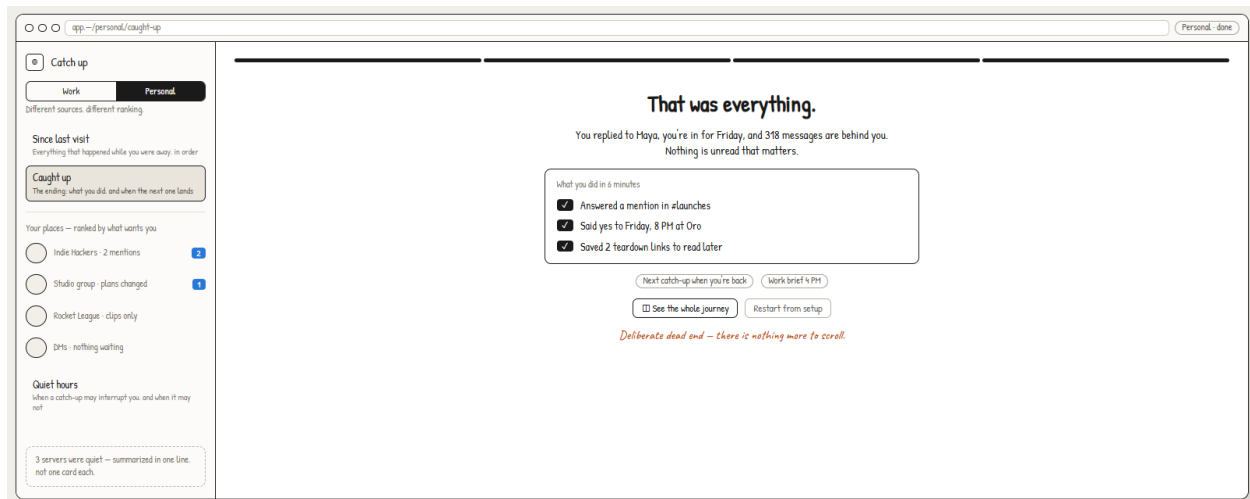

Overall view of the things done and things that remain.

The “personal” equivalent first page.

The homepage and essentially the entire product.

Overall view of the things done and the things that remain.
